```javascript
var jwt = require('jsonwebtoken');
import { authentication } from 'wix-members-backend';

const key = "<PrivateKey>";
export async function getToken(contactDetail, email) {
    var payload = {
        first_name: contactDetail.firstName,
        last_name: contactDetail.lastName,
        email: email
    }
    var signOptions = {
        issuer: "wix",
        subject: email,
        audience: "miniOrange",
        expiresIn: "48h",
        notBefore: "2",
        algorithm: "RS256"
    };

    return jwt.sign(payload, key, signOptions);
}

export function myLoginFunction(email, password) {

    return authentication.login(email, password)
        .then((sessionToken) => {
            return sessionToken;
        })
        .catch((error) => {
            console.error(error);
        });
}
```
